The UCLA Center for World Health has forged strong relationships in Malawi in order to conduct clinical, behavioral, and basic science research, and to provide training opportunities for UCLA students, residents and fellows. Our main collaborator in Malawi is Partners in Hope (PIH) Medical Center (pictured) in Lilongwe, the capital city. PIH provides free HIV prevention, care and treatment to over 5,000 patients, and has also developed outreach programs to support rural clinics in central Malawi.

We are pleased to offer a clinical rotation at PIH Medical Center for two senior medical students in the spring of 2019. Malawi is among the poorest countries in the world, and students participating in this elective will gain broad experience in the delivery of primary care medicine to extremely underserved populations. The rotation has an emphasis on the management of HIV/AIDS in resource-limited settings (HIV prevalence in Malawi is approximately 11%), and the management of malaria, tuberculosis, parasitic infections, and common routine health problems such as diabetes and hypertension. Students will rotate through an HIV clinic and a small inpatient ward at PIH. Approximately 70% of patients are adults, although one clinic each week is dedicated to maternal-child and family health. Students may have the opportunity to visit Kamuzu Central Hospital (Lilongwe’s largest tertiary care center), nutrition programs, and visit patient homes as part of community outreach.

Students will also be supervised by other U.S. and Malawi trained internists and family physicians, and work alongside Malawian clinical officers, nurses and providers-in-training. UCLA students are expected to participate in educational conferences and journal clubs during the rotation.

The rotation in Malawi has been developed with formal goals and objectives. We are seeking students with an interest in caring for underserved populations, and those with enthusiasm for global health, HIV, infectious diseases, and health service delivery in resource poor settings. Students will be expected to demonstrate the highest level of maturity, professionalism, and cultural sensitivity. Students should be adaptable to the challenges of living in Malawi (frequent power outages, limited communications, including internet).

Interviews for the elective will take place on Friday, October 5, Saturday, October 6, and Tuesday, October 9, 2018. Students selected for this rotation are required to participate in a full day pre-departure training program in Los Angeles on Saturday, January 12, 2019. Upon return home from Malawi, students will be expected to provide feedback through written evaluation forms, and participate in a mandatory lunchtime feedback session on Thursday, May 30, 2019.

Students will receive $2,500 of support for the Malawi clinical rotation. These funds are awarded upon return from Malawi to defray some of the costs of roundtrip airfare and in-country accommodation and food. Students will need to cover the remaining expenses from other funds, as the cost of this rotation will exceed the amount provided through the Global Health Education Programs.

Rotation dates for Malawi have been confirmed. **Students applying to this elective must be able to commit to being abroad from March 31, 2019 to April 20, 2019.** Note that a March 31 start date will require departure on March 29, 2019, at the latest.

Questions regarding this rotation should be directed to Dr. Traci Wells at twells@mednet.ucla.edu. Thank you for your interest in the clinical experience in Malawi!
