

GLOBAL HEALTH SELECTIVE 2024

Reducing inequities in access to quality healthcare, both locally and globally, requires a nuanced understanding of health determinants examined through political, historical, structural, and social lenses. In this course, we explore the underlying variables that shape healthcare access and delivery, and that present challenges to closing the health equity gap. Themes addressed include the global burden of disease, the various global health players, the importance of human rights in advocating for health equity, and the intersection between climate change and health. We will also address approaches to ethical and sustainable global health partnerships.

Students are welcome to attend any of the events listed below, regardless of enrollment status, but attendance at all events (as described below) is required for students to receive course credit.

*Enrollment in the Selective is unlimited

REQUIRED SELECTIVE EVENTS
